Construction of upgrades and improvements to Bergen Avenue Pump Station, Town of Kearny, $3,686,590.00, were financed by the New Jersey Water Bank (NJWB). The NJWB is a State Revolving Fund program jointly administered by the New Jersey Department of Environmental Protection (DEP) and the New Jersey Infrastructure Bank (Infrastructure Bank) and uses a combination of funds provided by the United States Environmental Protection Agency, the DEP, and the Infrastructure Bank to provide very low interest loans to borrowers for environmental infrastructure projects.

This project will provide water quality benefits by upgrading the Bergen Avenue Pump Station to accommodate additional flow diverted from the Sandford Avenue District as part of the Town of Kearny's effort to address recurring sanitary sewer emergencies, including installation of new pumps, standby generator, and control system enhancements to achieve a pump station firm capacity of 500 gallons per minute, benefiting residents and businesses within the Kearny Municipal Utilities Authority Sanitary Sewer Service Area, Kearny, New Jersey.

State Revolving Fund programs around the nation provide states and communities the resources necessary to maintain and improve the infrastructure protecting our valuable water resources nationwide.
